After-sales service

01 Device

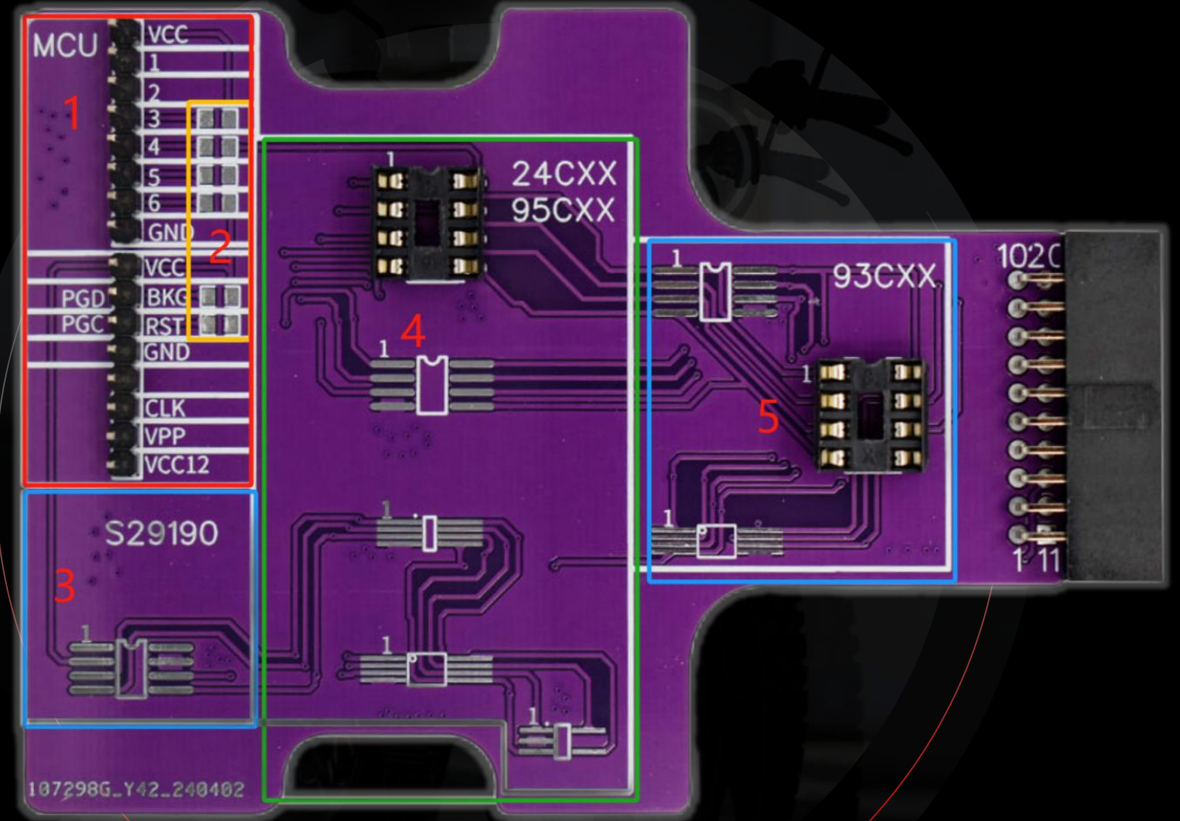

Device

- 1、PACKING BOX
- 2、MOTORPRO Equipment
- 3、Adapter
(For MCU/SOP8 Memory Read and Write)
- 4、Dupont Cable *8pcs
- 5、USB Cable
- 6、Resistance
- 7、12 volts Power

Device

- 1、 For MCU read and write area needs to be connected to the DuPont line.
- 2、 Used to connect resistors, total 6 positions, (3-4-5-6)areas can be soldered 1K, 2. 2K, 4. 7K, 100R resistors

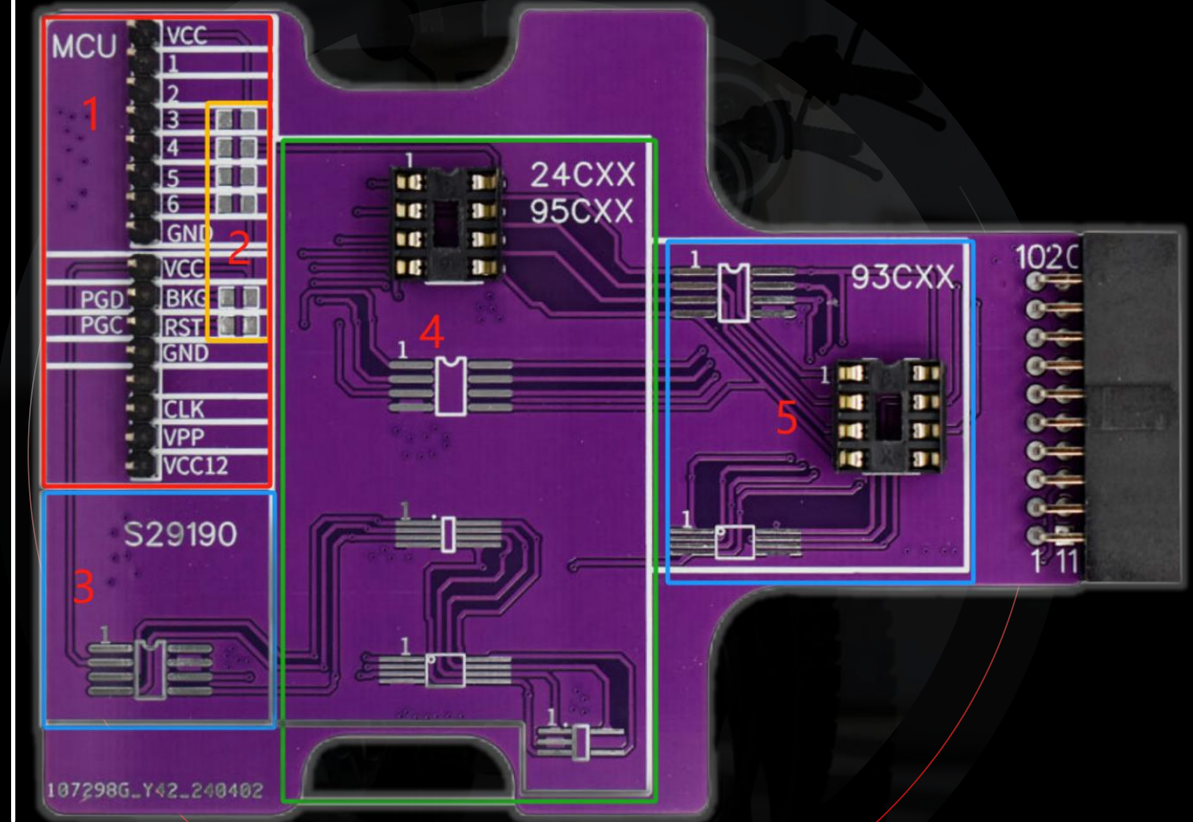

Device

3、 For Fixed memory read/write area, only for Model: SEIK0, S29XX series.

4、 Support reading 24CXX/95CXX memory (Eeprom)

5、 In this area, only support 93CXX series memory (Eeprom) read/write.

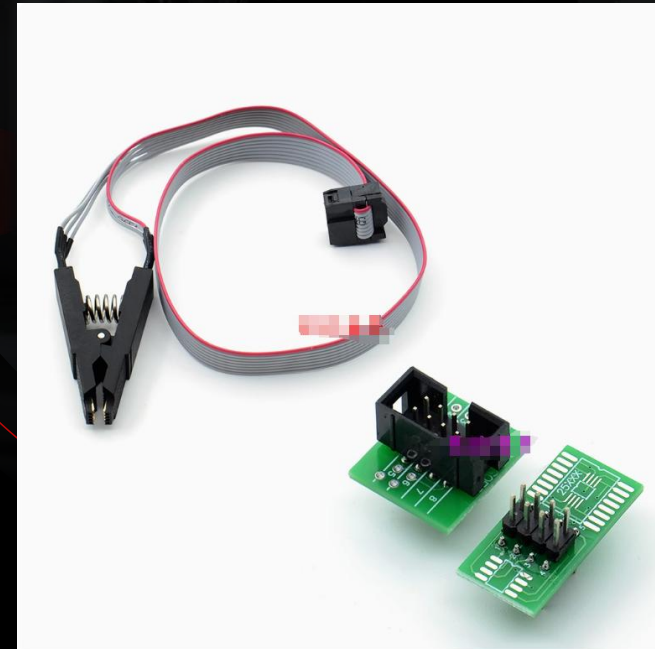

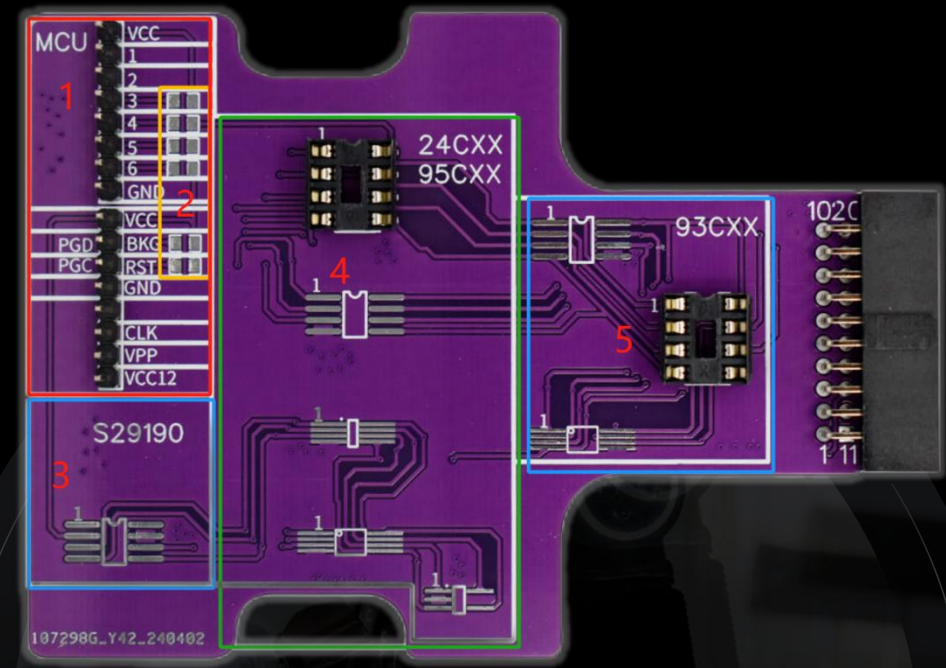

Device

Note:

The adapter supports connecting to SOP8 test clip to read data.

But when read/write data ,Maybe interfered by storage module, Causes data damage or loss , So don't recommend using

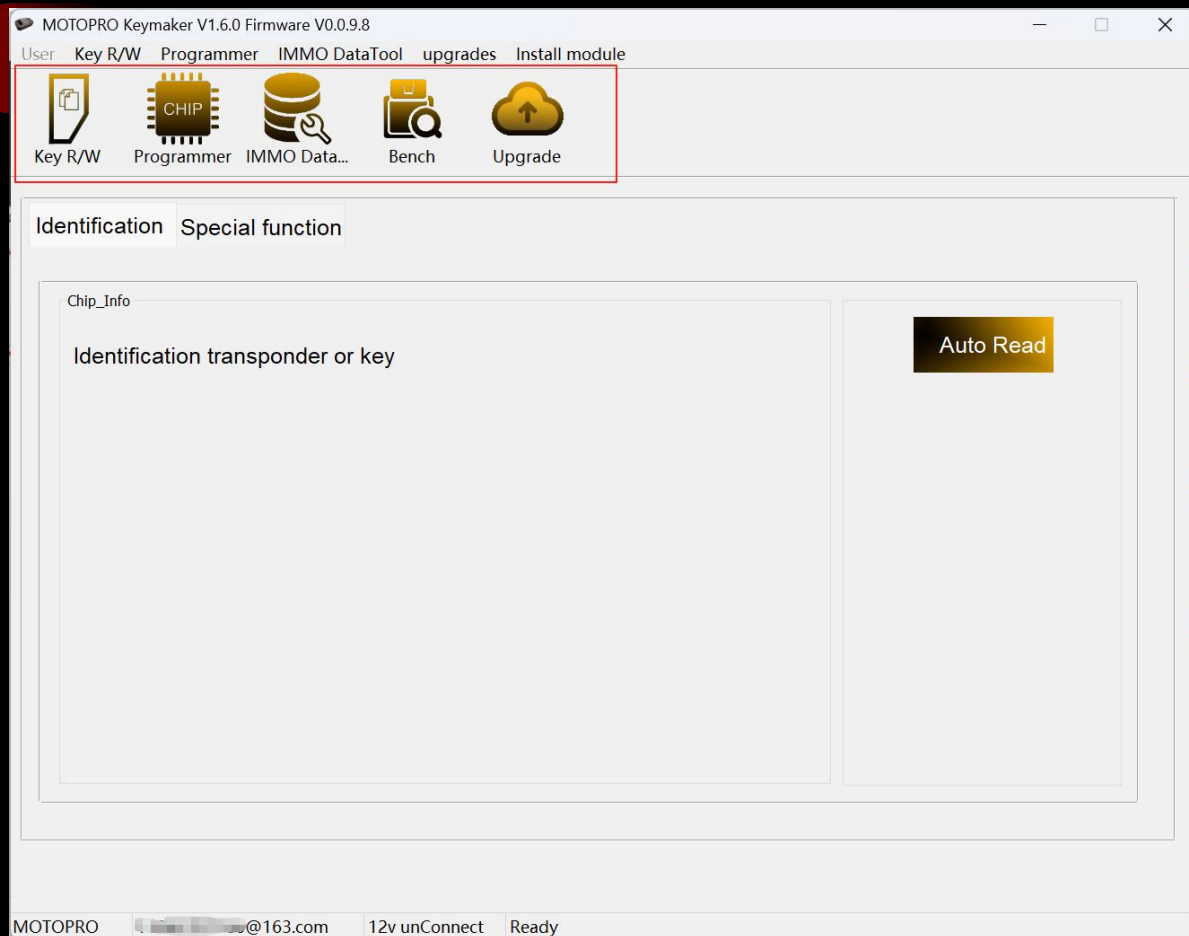

02

SOFTWARE

About software

一、Key Read

二、Programmer Functon (Read/Write data)

三、IMMO DATA Key Make

四、Bench Function

OBD refers to the OBD protocol, which connects the controller via Dupont wire to avoid digging and welding

五、Upgrade

Key Read

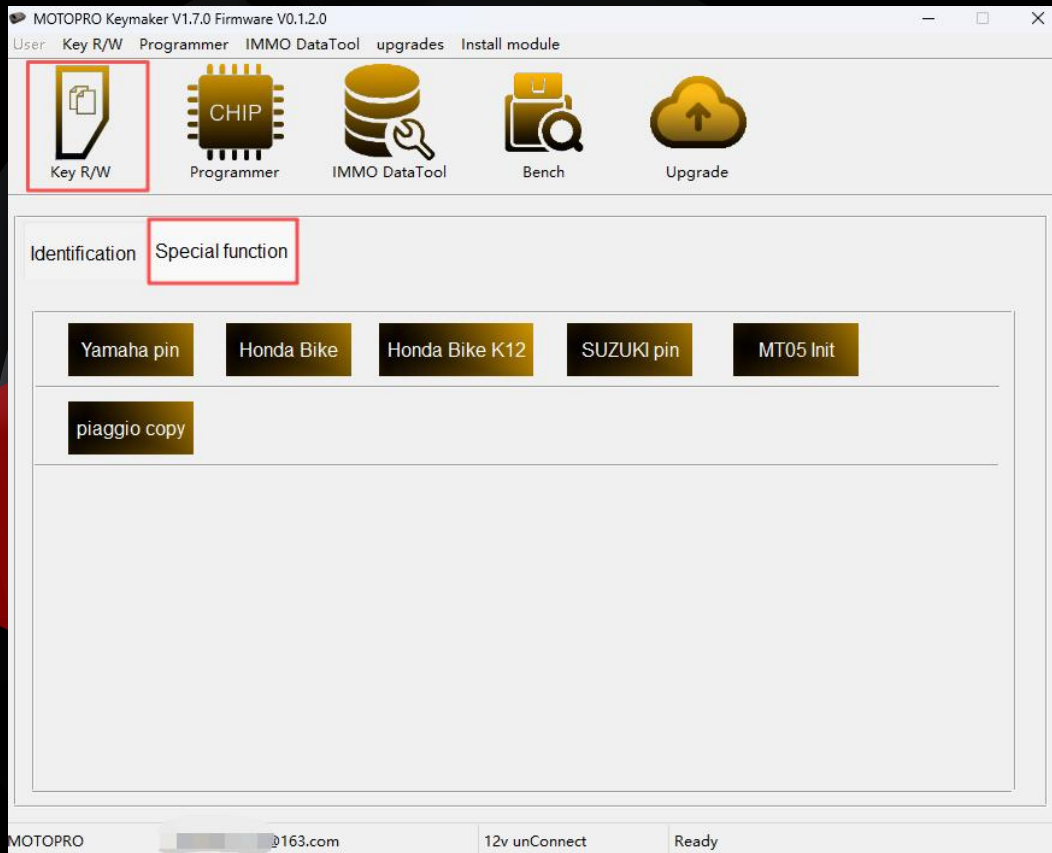

1. Read transponder types

2. Account used to connect to the server

3. 12V power prompt

4. MOTOPRO message return prompt

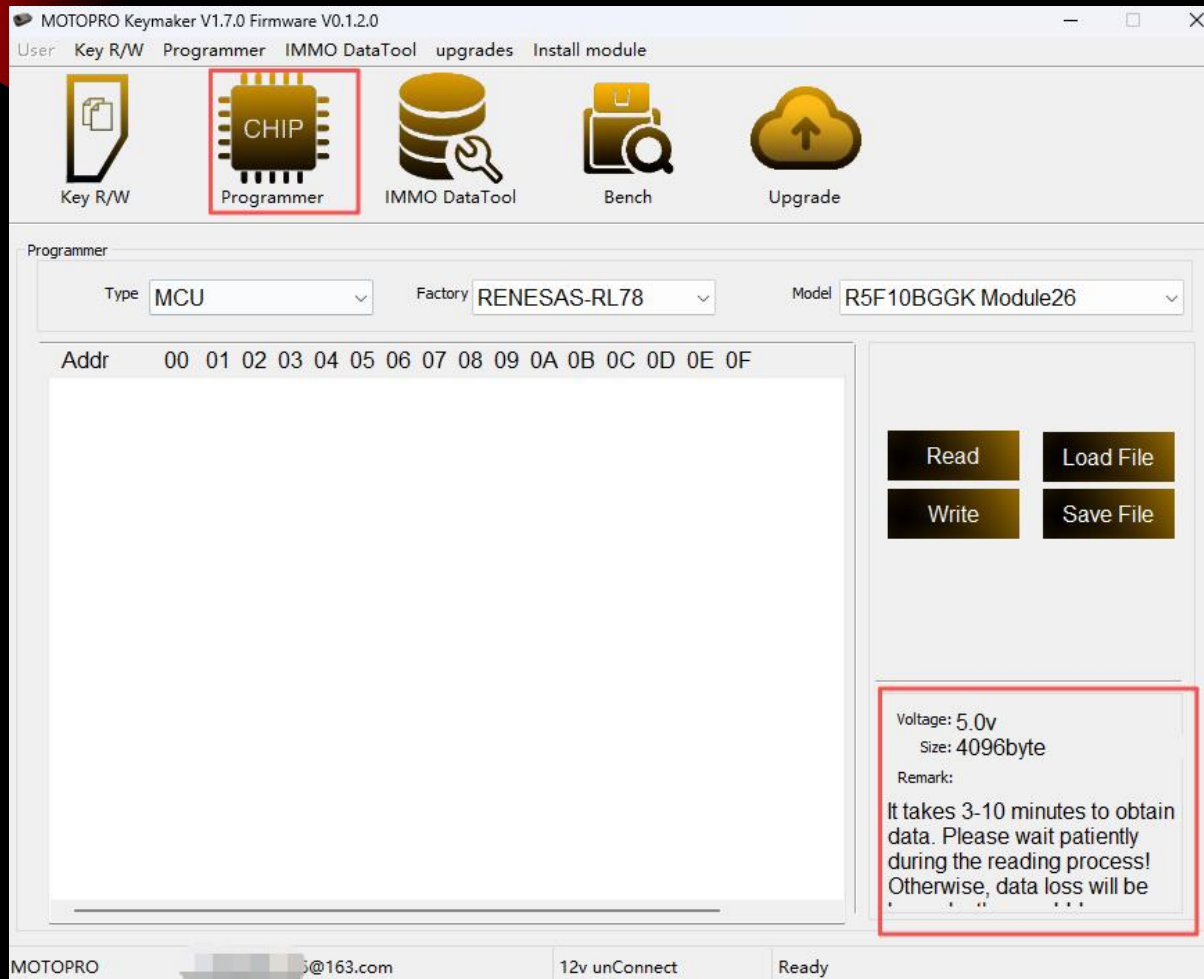

Key Read

Special Function:

- 1、Support Yamaha smart key PINCODE read (**Basic version free use**)
- 2、Support Piaggio chip copy (**Basic version**)
- 3、Support Honda smart key PINCODE read (**Module 23, need Authorization**)
- 4、Support unlocking Honda smart key K77/K1Z/K1N/K1B/K2V/K96/K97/K1B/MKRD1/MKRJ1/MKT D0/China Haojue (**Module 23, need Authorization**)
- 5、MT05 transponder Initialization function (MT05 is a special chip for MOTOPRO)

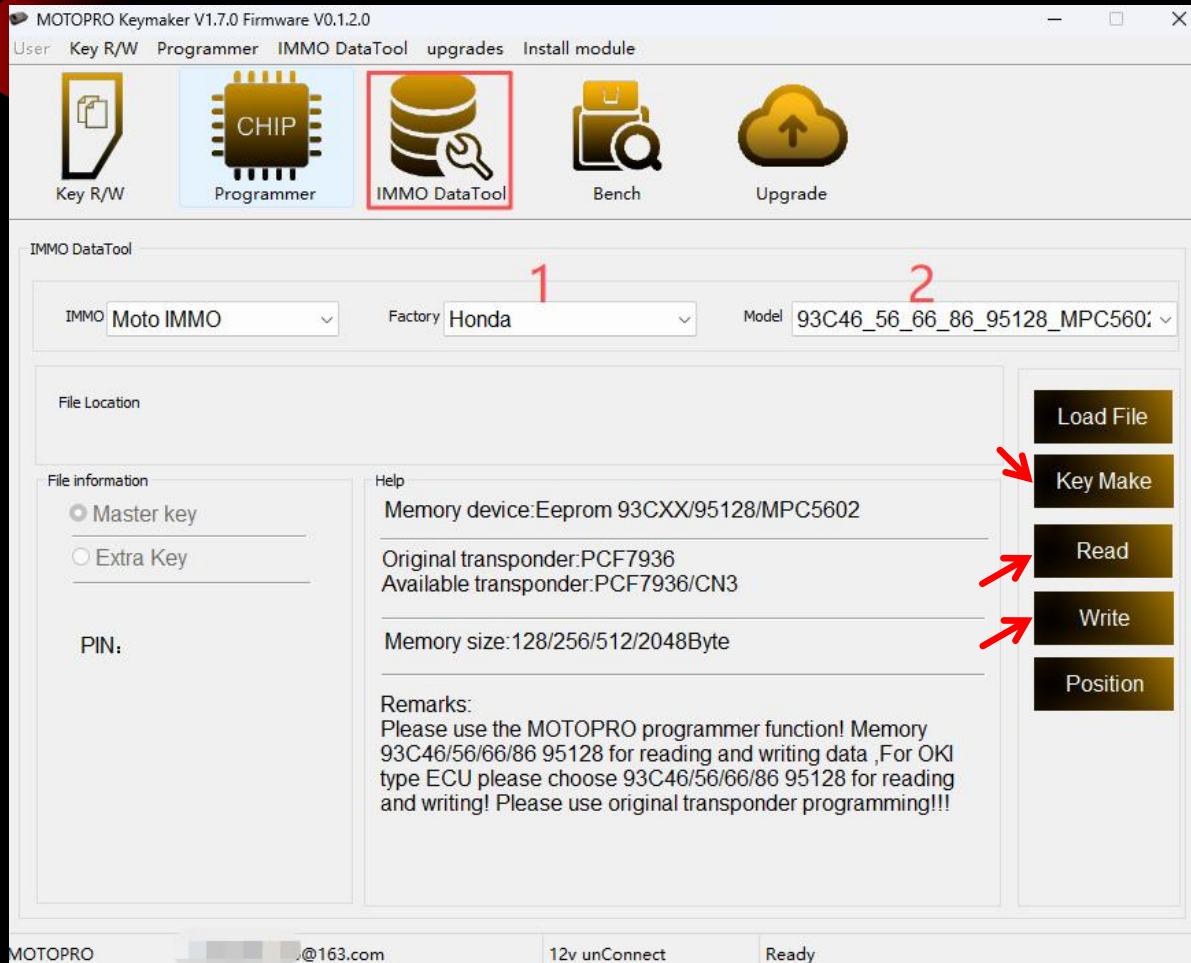

Programmer

For information on how to solder, where to dig holes, the software has a built-in wiring diagram, or you can contact after-sales for help.

Notice: Some controller have special requirements for reading data, Please read here carefully to avoid risk

Key Make

一、 Fully automatic data processing tool

We can select the motorcycle model and controller memory type, directly read the data, and program the new key.

二、 Programming Key Process:

1. Connect MOTOPRO to the controller.

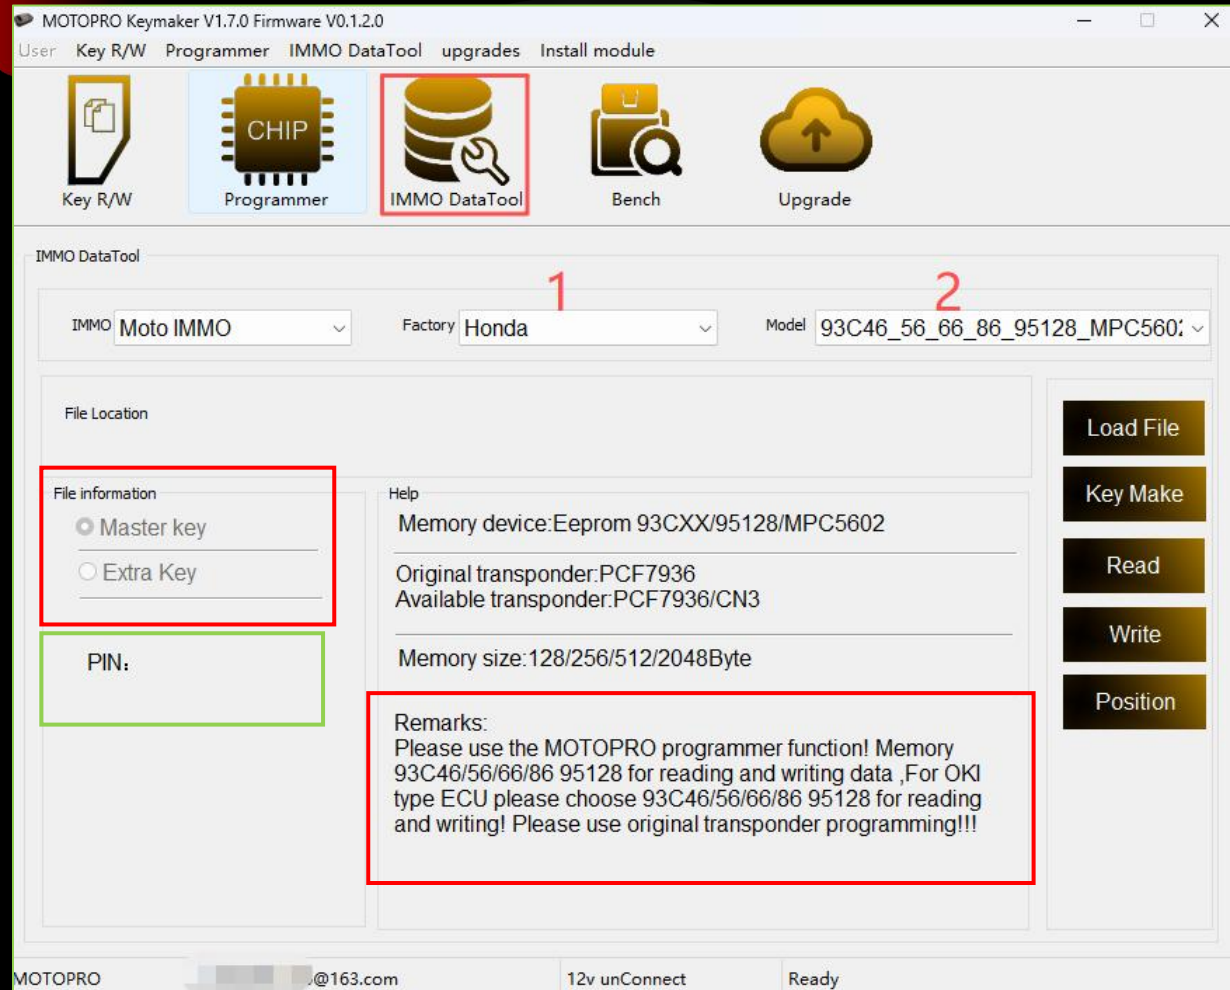

2. **Read**—Read the memory/MCU data; MOTOPRO will automatically save the data.

3. **Key make**—Program the new transponder or smart key.

4. Follow the software prompts. However, for some controller types, after successfully programming the transponder or smart key, MOTOPRO will create a new data file. We need to write the new data file back to the memory.

5. Done, start the motorcycle.

Key Make

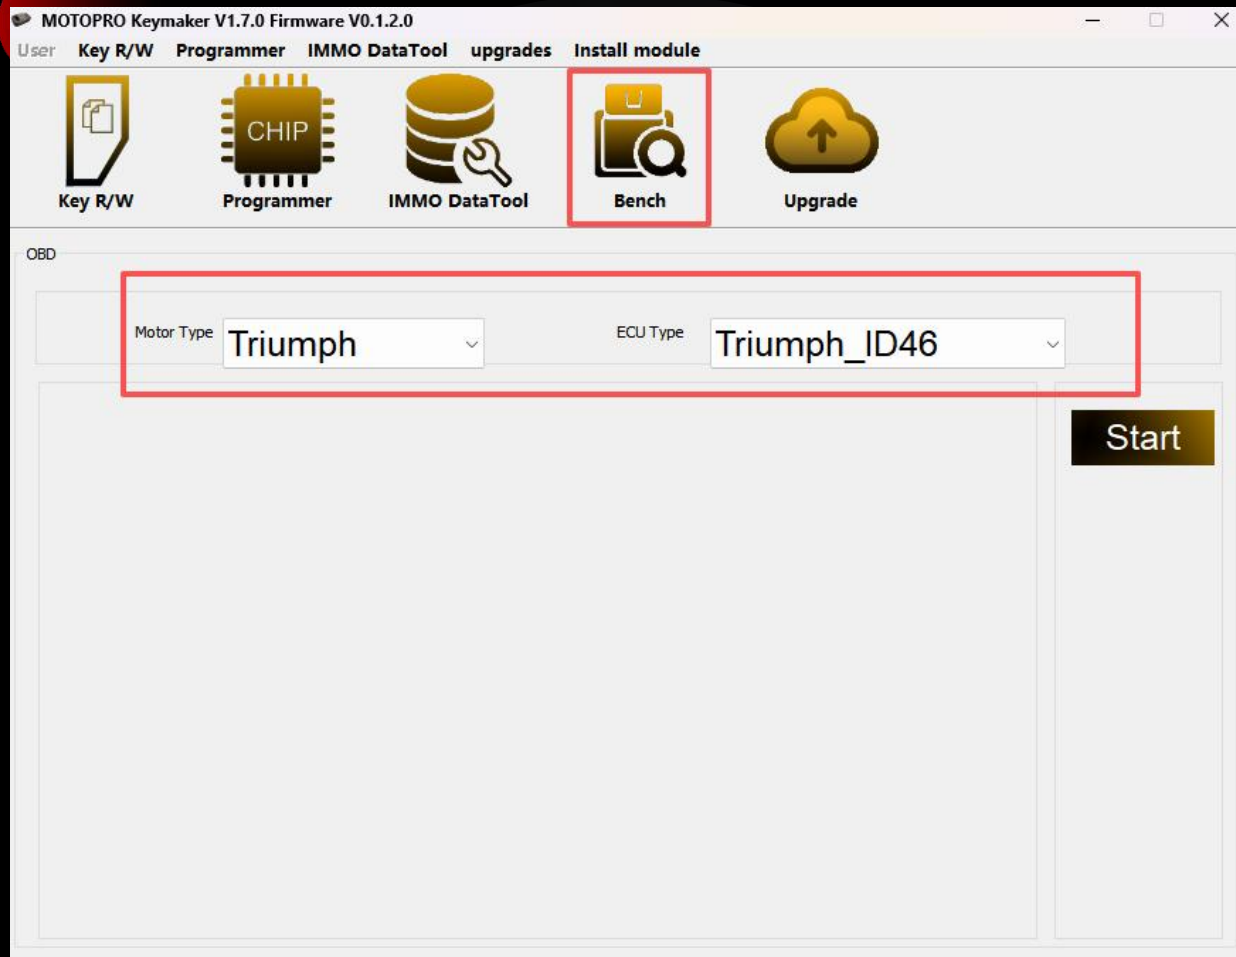

6. Models that require a PINCODE, You can use this pincode start bike directly .such as: Yamaha, Aprilia, MOTOGuzzi, Ducati etc.

7. when load the data ,Select the transponder type according to the prompts

8. Important reminder: Please read carefully each time you program your transponder to avoid the risk of operating errors.

Bench Function

The Bench function of the software does not refer to the OBD of the motorcycle. Here it refers to using the OBD protocol to avoid digging and welding. Make operation easier

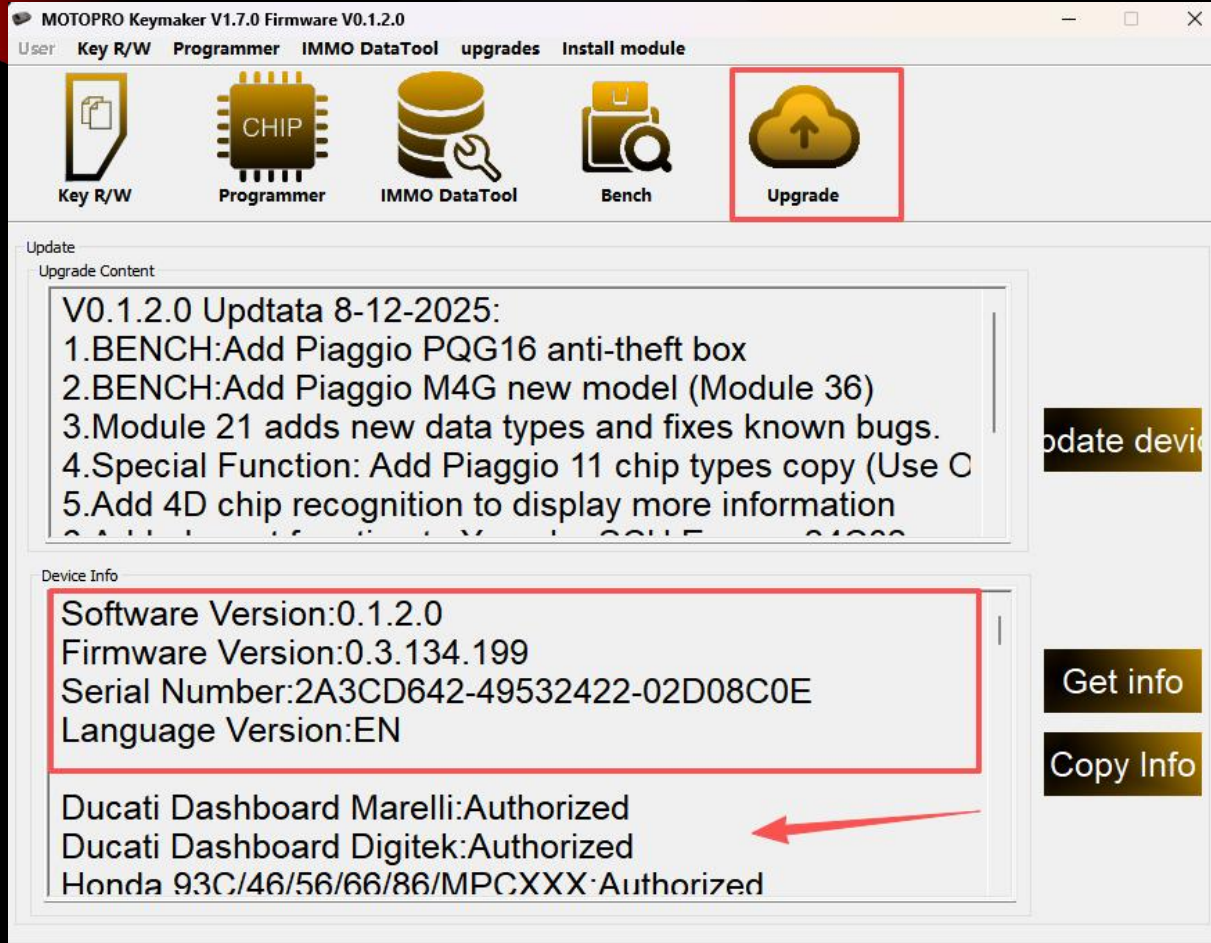

Support :

Piaggio

Honda

Triumph 46 Mechanical key

UPGRADE

一、Device upgrade

二、Authorized module

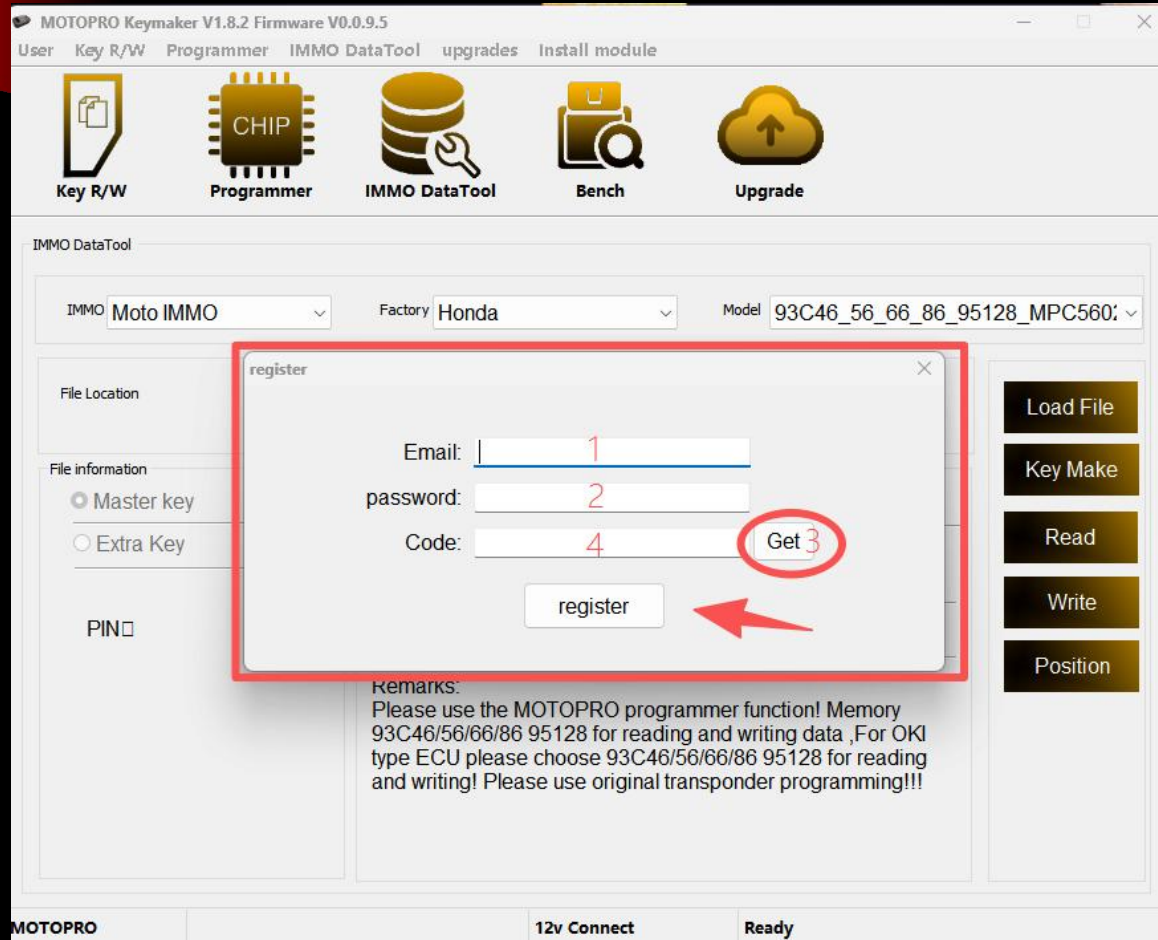

三、Select “Get info” to display the basic version functions and the types of modules that support authorization

03

REGISTER

REGISTER

- 一、Input your email address which will be also used to contact with our after sales team for technical support.
- 二、Enter a password (**remember it yourself**).
- 三、Select “Get”
- 四、Check verification code in your email address.

Press “MOTOPRO”

Download (Note: Please disable your computer's antivirus software before downloading the software.)

04 FUNCTION

Website : <https://qbblax.com/>

✓ **Basic Version Free Use**

✓ **No annual fee**

✓ **Built-in wiring diagram**

✓ **Module**

(When you encounter special models, you need to upgrade the function through the authorization module)

Basic Version

Function	Brand	Support Model
Transponder Read/Write	/	PCF7936、PCF7938、PCF7939、Texas Crypto、4D、8A、MQB48、TK555

Basic version Function

05

Transponder

The main transponder types used in motorcycles :

Original Chip:

Original 7936AA(46)、

Original 7938XA(47)、 Original T5、

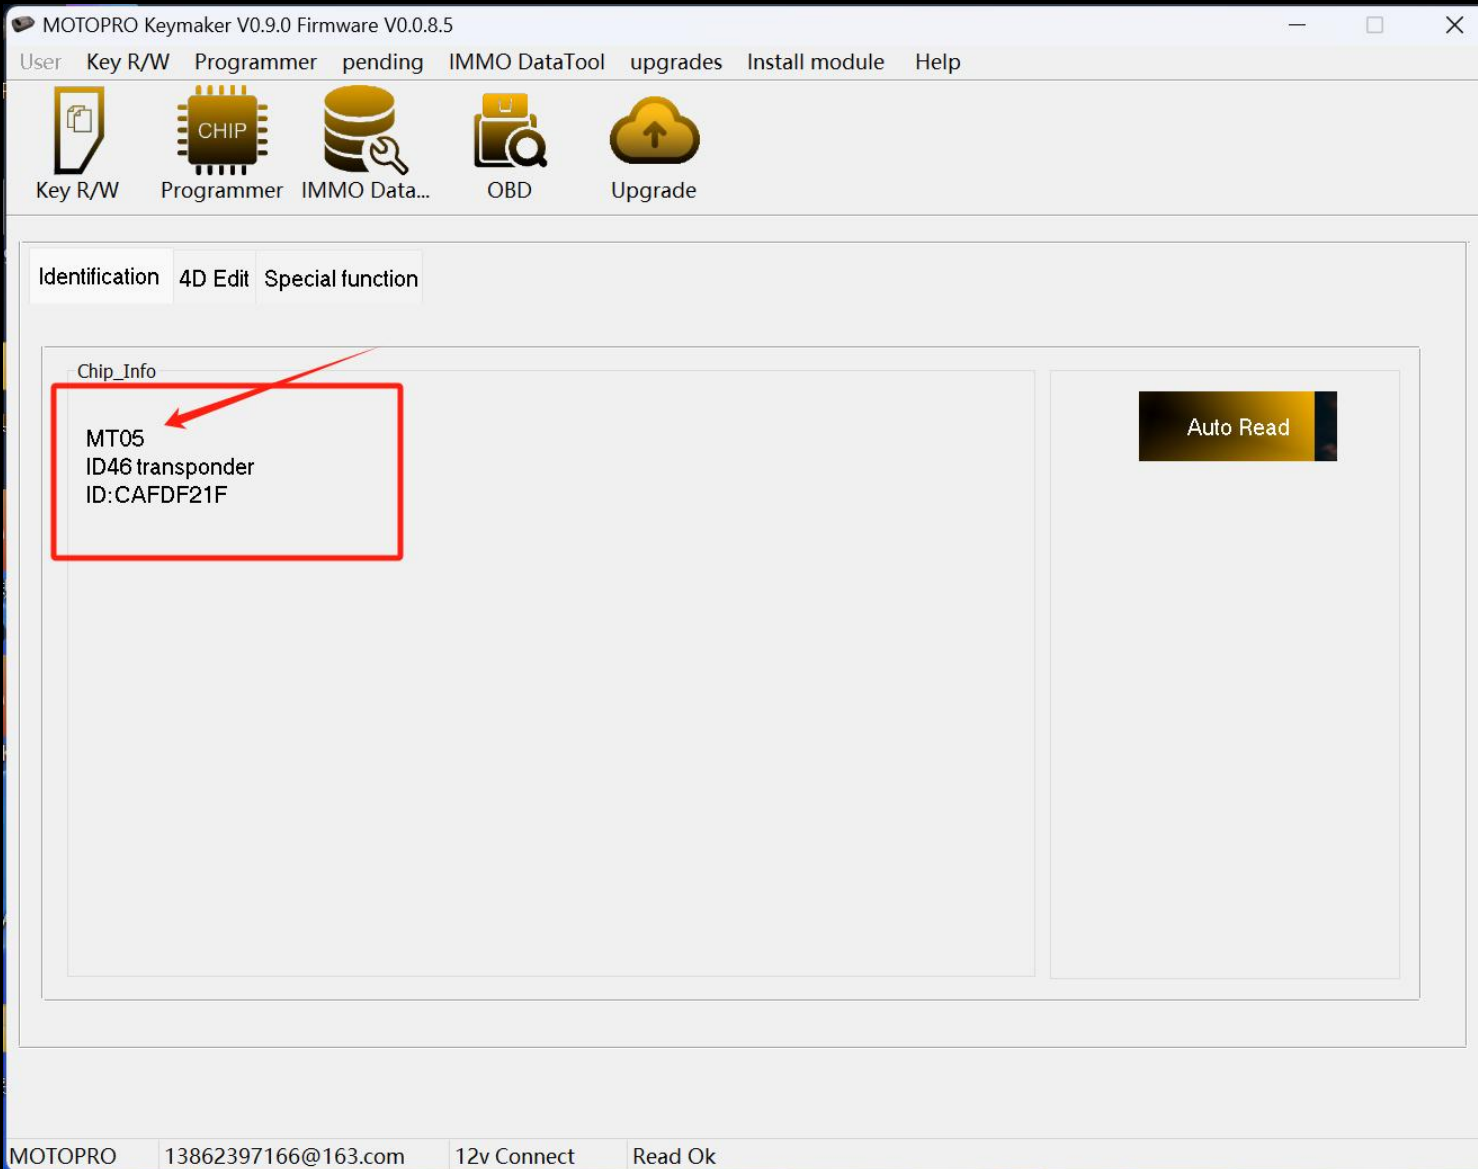

Original 8A 、 Original 7939MA(4A)、

Original 4D

Aftermarket Chip:

**JMD KING Chip(Need to generate blank transponder)(46 or 4D)
CN3**

Transponder-MT05

**MT05 Function:(motopro
Dedicated chips)**

**When you don't know how to
choose transponder ,you can Use
MT05**

- 1. Ducati ktm 4D copy (Module 22)**
- 2. Triumph 46 models programming
and copying (Module 25)**
- 3. 4D chip, 46 chip programming
(Like yamaha, honda, suzuki,
kawasaki, etc.)**

After-sales service

After-sales service

1. To take photos of MOTOPRO and motorcycle's IMMO controller together
2. To take photos of front side and back side of the IMMO controller
3. To inform after-sales service team about the brand and model of motorcycle and manufacturing year
4. To send all above info to Email : [motopro.aftersales@gmail.com](mailto:motopro aftersales@gmail.com)

Key Tips: To contact with our after-sales service team by the email Address which you ever registered on your MOTOPRO

MOTOPRO
